PREMIER PLUS DISTRIBUTOR

Vendor Managed Inventory Program

The Omniflex VMI (Vendor Managed Inventory) program reduces customer costs associated with maintaining hose, hose fittings, adapters and hose assembly inventories. The program allows the customer to eliminate man hours to receive product, replenish stock and forecast usage. Costly order entry errors and emergency purchasing are eliminated. Usage is constantly monitored to minimize inventory dollars. **Contact your Omniflex sales representative for more details.**

Programs

AMI Automated Managed Inventory StockBox -RFID Inventory system

StockBox, is an inventory management system, which incorporates RFID technology and lean Kanban methods to create a simple, effective means for efficient stock management. Reduce overall inventory investment and streamline materials management processes, while eliminating manual counts, stock outs and inventory waste.

VMI Vendor Managed Inventory 3 Bin Inventory system

3 Bin inventory system, allows the bin to create the order while maintaining a weekly/monthly inventory level that suites the customers usage. When the bin is empty it is simply put into a box, allowing the other 2 bins behind to fall into place for usage. The bins are then pickup, replenished with inventory and delivered back to there designated location.

VMI Vendor Managed Inventory Barcoded Labelled Bins

Barcoded labelled bins is a 1 bin system that is manually controlled by an Omniflex technician. The bins are labelled with picture, part number and barcode. Omniflex technician will review each bin identifying a requirement, create a quote and email for PO. Upon receiving the PO an order for the requirements is processed, delivered and put away. The technician then review's each bin again and the process repeats it self
